Los Alamos, New Mexico 87544

Dear Wright,

I am writing to remind you to look at a letter I wrote last September 17, 1968. You promised to send the requested information as soon as possible. I realize this has been a busy year for you, and that possible has just not been very soon, but I don't want to give you the idea that I am no longer interested in good old Pu. We ran out of math and computing \$\$ and there has been no rush for the numbers which had they arrived would have simply laid on my desk in a heap.

May I at least have:

1) The HP numbers of the three data points shown in LA-1151 after the first year -- your embarrassing long term points.

2) Any additional information --body weight, anything on

Hp-11. 3) Copy of the original data on the case you designate Chi-I.

4) If you have a chance, look at the Sept. 17 letter and reply to the rest of the queries included there.

We have identified two of the four people JGH injected with transuranics -- that is, medical records, case numbers and names, and we know where to look for burials of both of them. Might I suggest that as long as you will probably see Dave Bruner before I do, you suggest that his Pu repository include photocopies of all original records --as far as possible-- on each case. This would include counting data and so on.

So much for now, but I would like to get that review completed and polished this year.

Sincerely

Sincerely,

Patricia W. Durbin
